Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 4 has been rejected under 35 U.S.C. 102(b) as being anticipated by Dubberke, 5315741.

Regarding claim 4, Dubberke discloses a push type fitting having

- a hollow outer body (3) having sidewalls, i.e., inner side wall and outer side wall that define side 33, and a pair of holes (35, 36) that are diametrically opposed to each other (figure 10a)
- a hollow sliding body (2) that slides in and out of the hollow outer body (3) having an inner side wall and an outer side wall that define side 13 with a pair of opposing through holes (31, 32), i.e., holes 31 and 32 are diametrically opposed to each other
- a ring body (25) having an aperture (51, 52) housed in the sliding body (2) and being formed by two through holes
- a spring (24) held in the sliding body (23) between the sliding body (2) and the ring body (25)

wherein the sliding body (2) is capable of sliding between position where the through holes in the sliding body and the aperture of the ring body are aligned and a position

Art Unit: 3677

where they are misaligned (figure 12 and 14). The structure only has to be capable of performing the intended function, which, in this case, it slides relative to the ring body. The sliding body also slides into and out of the hollow outer body (3) between a position where the holes are aligned with the through holes making up the aperture in the ring body.

Allowable Subject Matter

3. Claims 1-3 and 5 have been allowed.
